

Plugged pi into ethernet

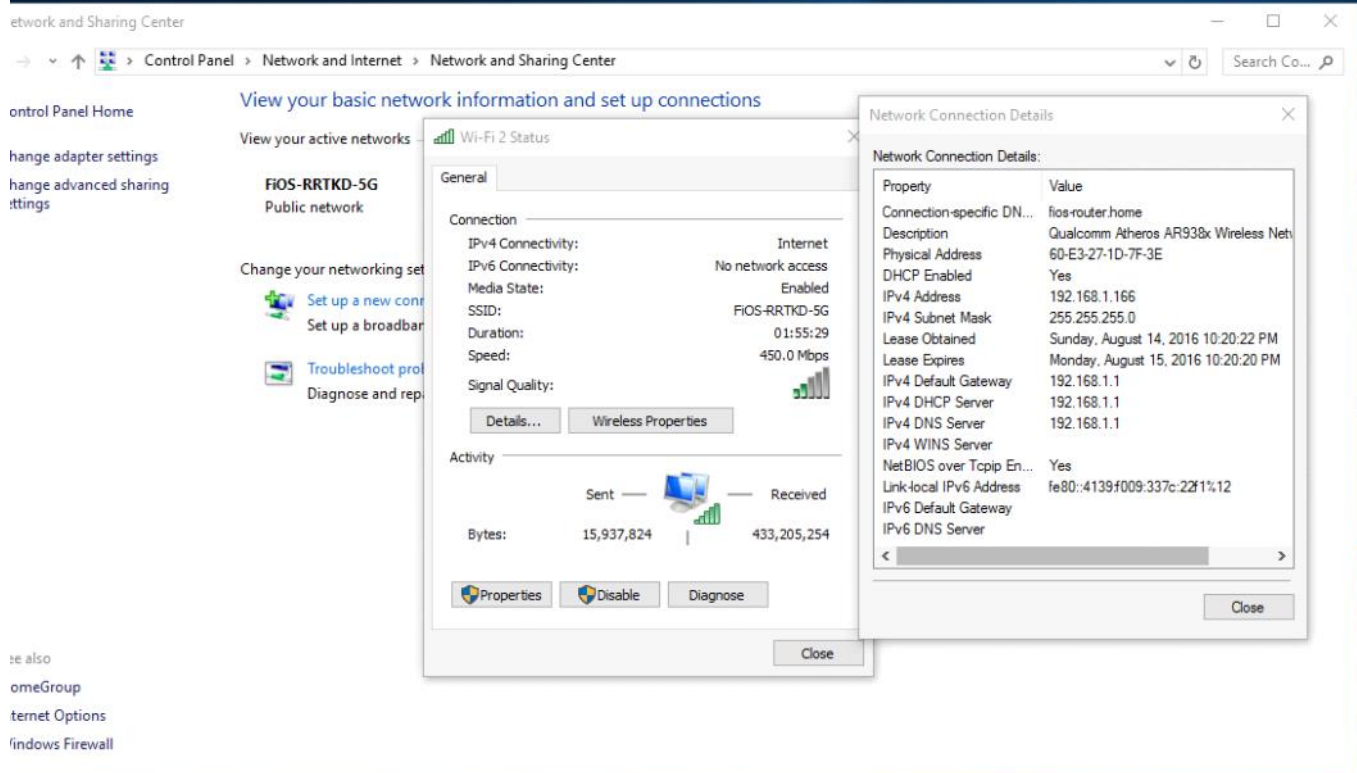

```
ping raspberrypi
ssh pi@192.168.1.165
Rasperry
```

Use whatever Ip it gives u  
We need to make a script to do this automatically

```
sudo apt-get install tightvncserver
https://www.realvnc.com/download/viewer/
https://www.raspberrypi.org/documentation/remote-access/vnc/
```

Ran the commands there  
Used vncserver 192.168.1.165:1  
And it all worked just fine

Desktop id = 192.168.1.166  
Rpi = 192.168.1.165
